| 20 | 460 V | 0 | 0 | 430' | $650{ }^{\prime}$ | 1030' | 1610' | 2470' |
| 25 | 460 V | 0 | 0 | 0 | $530 '$ | 830' | 1300' | 1990' |
| 30 | 460 V | 0 | 0 | 0 | $430{ }^{\prime}$ | 680' | 1070' | 1640' |
| 40 | 460 V | 0 | 0 | 0 | 0 | 0 | 790' | 1210' |
| 50 | 460 V | 0 | 0 | 0 | 0 | 0 | 640' | 980' |

## Combining Multiple Wires of Different Gauge (AWG)

You may combine, 2 or more, different gauged (AWG) wire for your installation. Use the formula below to ensure that National Electrical Code (NEC) requirements are met.

## Formula:

$$
\frac{\text { Wire } 1 \text { length }}{\text { Maximum run } 1}+\frac{\text { Wire } 2 \text { length }}{\text { Maximum run } 2}+\cdots \leq 1.00
$$

Where maximum run is the maximum length permitted for that specific gauge of wire. See our drop wire selection table for maximum run information.

## Example:

You have 375 feet of \#6 wire buried between the service entrance and the wellhead. A new 3 HP 230 V single phase pump will be installed to replace a smaller pump. The new pump will be set at 200 feet below the wellhead.

## What wire gauge is suitable?

From the drop wire selection table, \#6 can be use for up to 750 feet and \#10 for up to 300 feet, $(375 \div 750)+(200 \div 300)=1.167$ which is greater than 1 , so \#10 can't be used; \#8 wire can be used for up to 470 feet. Using the same formula, $(375 \div 750)+(200 \div 470)=0.9255$, this is less than 1 and will meet NEC standards.

## Continuing the above example...

In the same installation, you also have 110 feet \#10 submersible wire from your existing well. Can you add 90 feet wire to achieve 200 feet? What wire gauge?

The answer is yes, and you can use 90 feet \#6 wire.

$$
(375 \div 750)+(110 \div 300)+(90 \div 750)=0.9866
$$

Now the decision is whether to buy a brand new 200 feet of \#8, or 90 feet of \#6. Check the prices for each wire to make a smart decision.
